

Laboratory Service

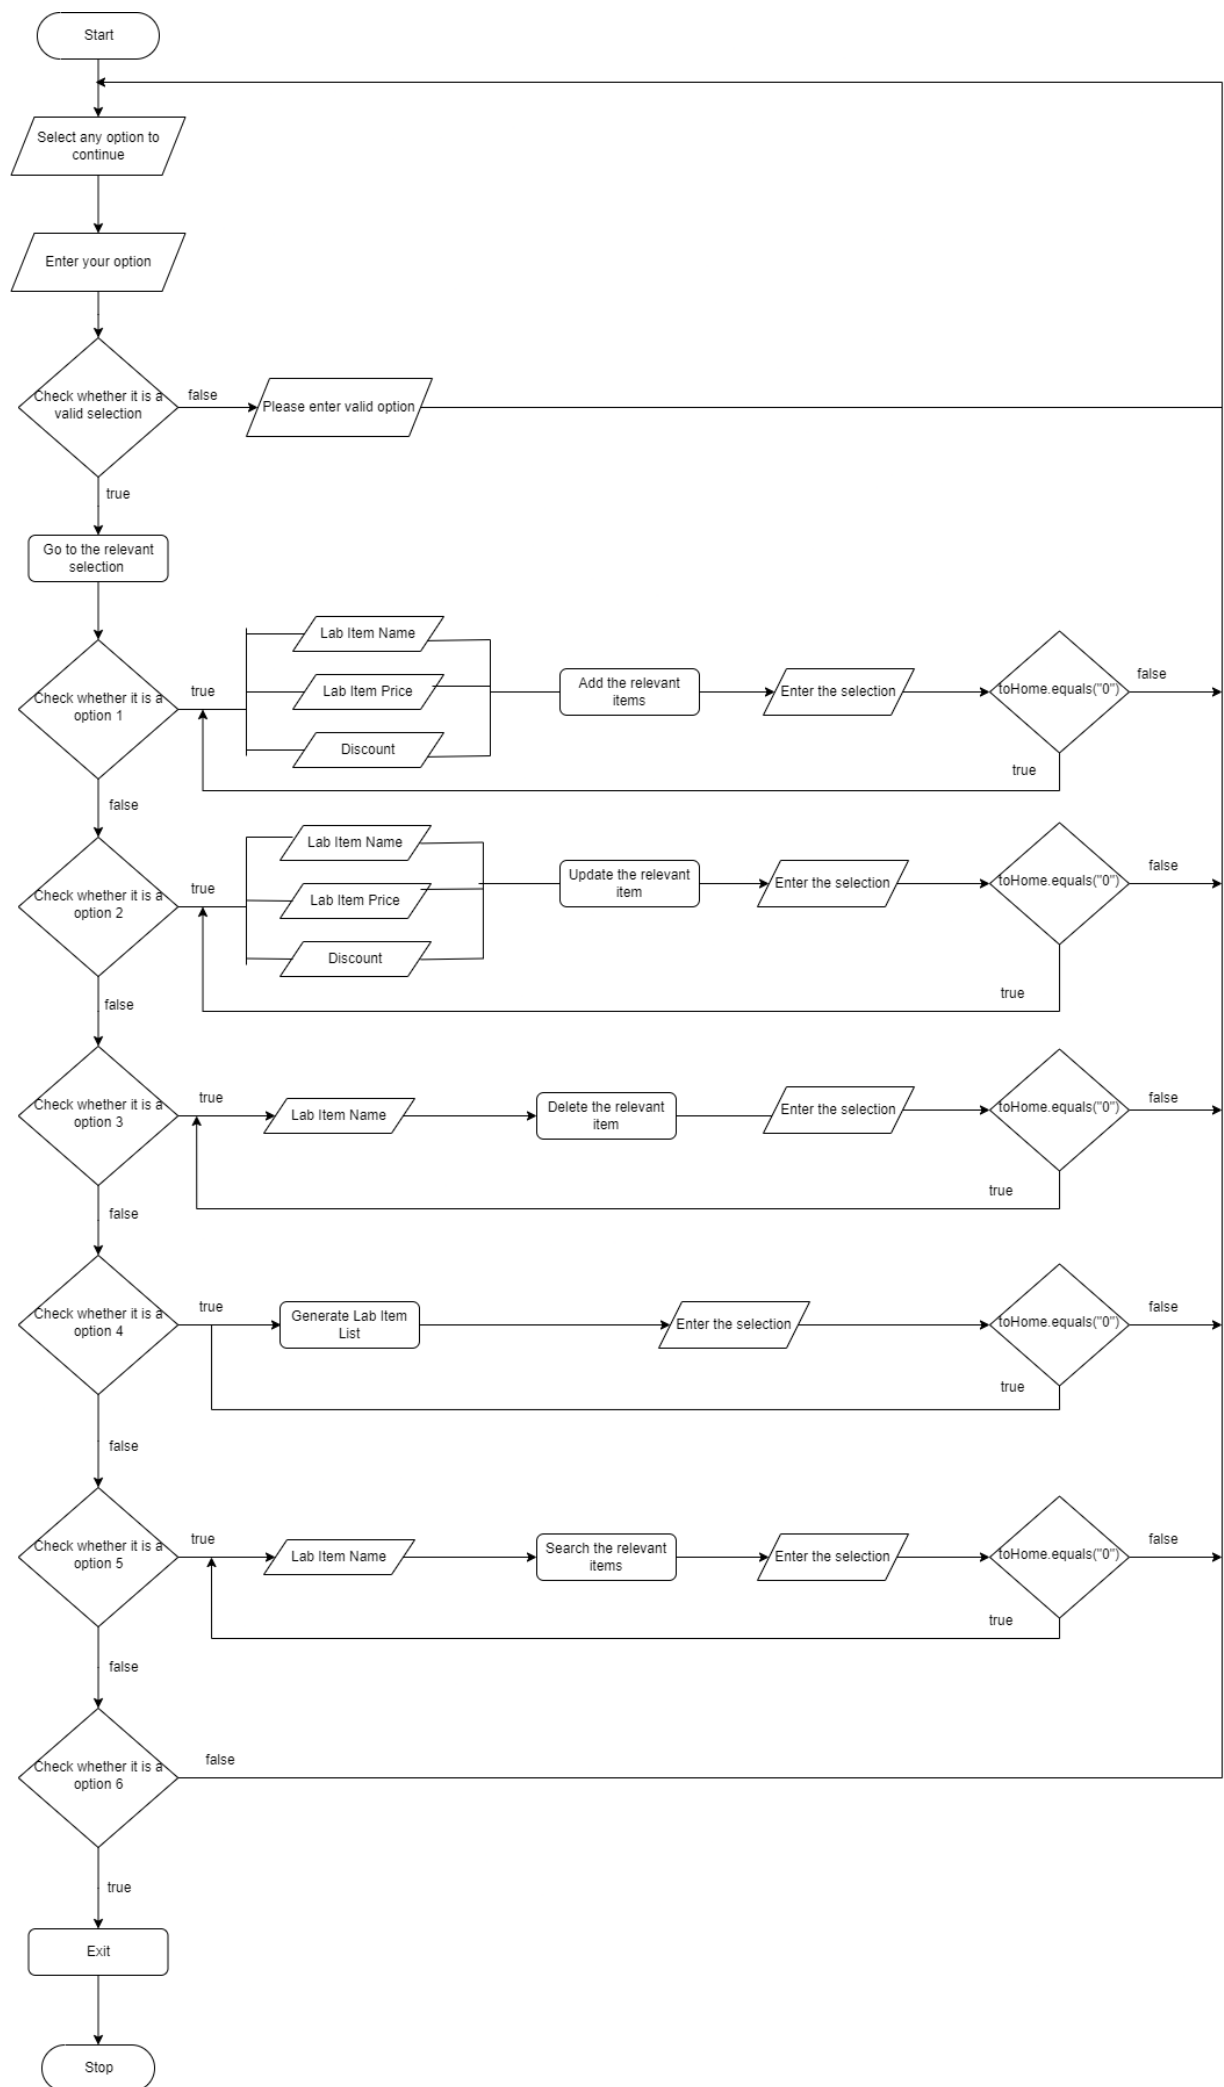

A) -Explain the scenario using a diagram

It is a retail situation in which the Director and Supplier collaborate to purchase and sell laboratory items to their respective laboratories. In this situation, there are one producer and two consumers, they are Director Consumer and a Supplier Consumer. The supplier consumer will then add items to their item list and offer discounts on those items. Director consumer will display the final measured bill. To achieve best practices in OSGI, we expose only the producer service interface rather than the implementation.

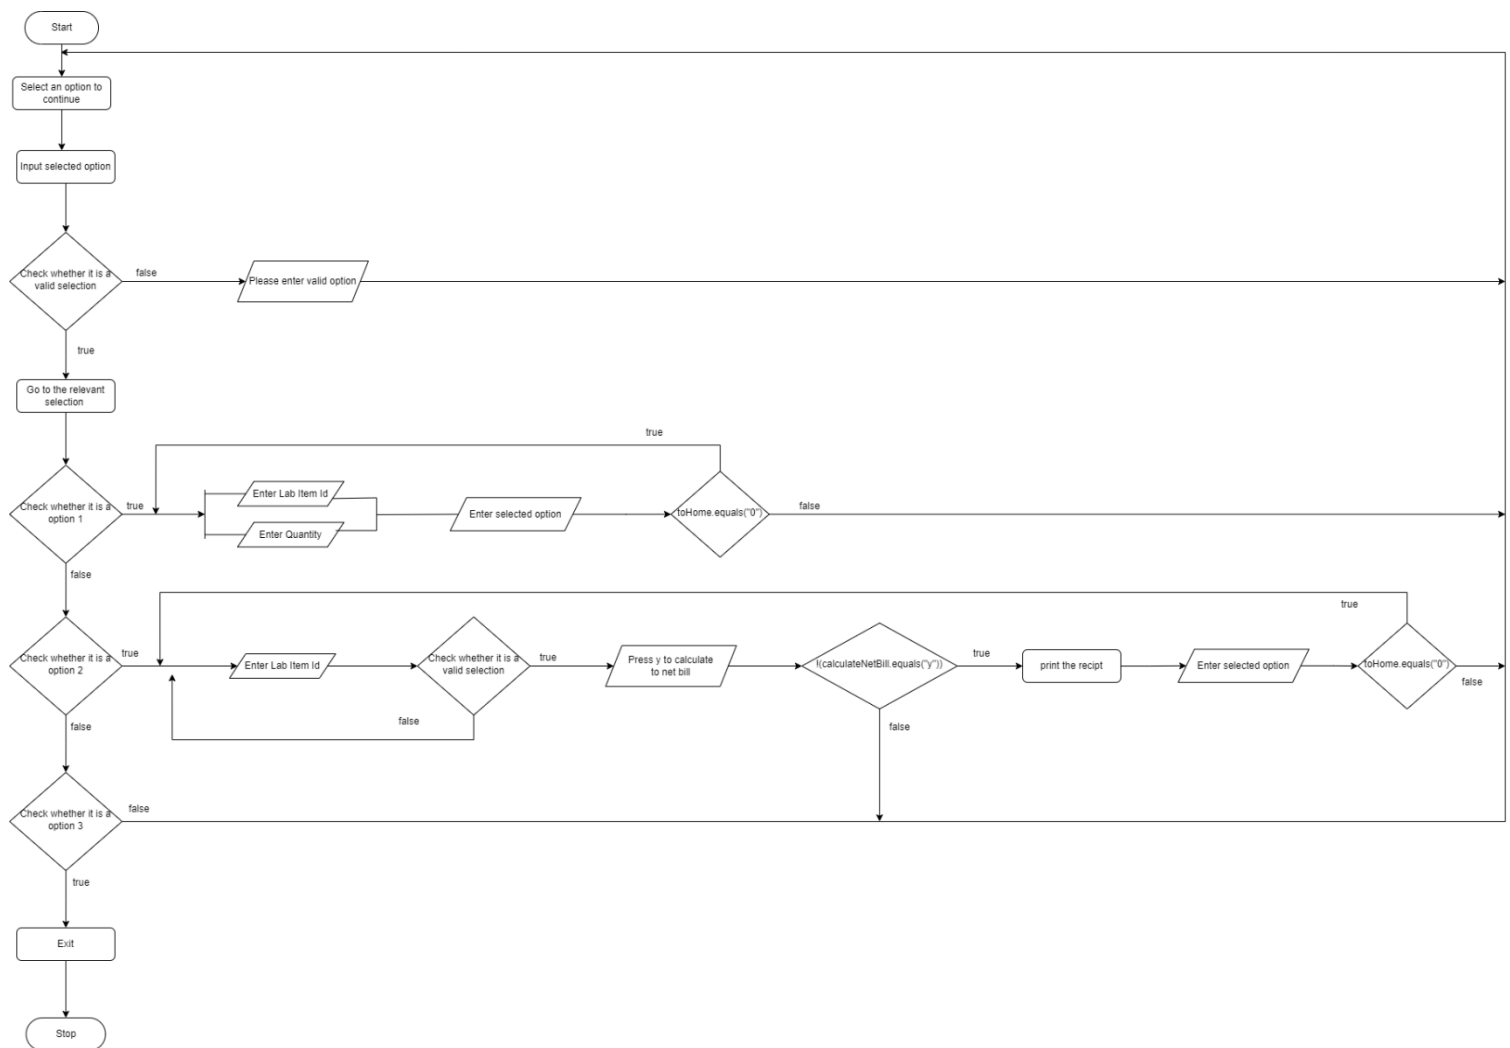

Consumers can work through the interfaces.

FIGUER [01]

The following diagram is workflow of laboratory supplier consumer. There are 6 options of add, update, delete, search items and, supplier can exit by choosing option when necessary. In the process of adding new item to item list, Supplier must input laboratory item name, price, discount which are then save to list. If Supplier input any other input rather than mentioned options, system notify to enter valid option. Then the auto generated id and final price will be calculated by system.

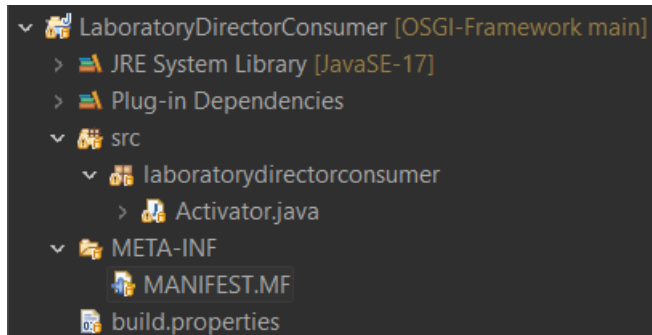

FIGUER [02]

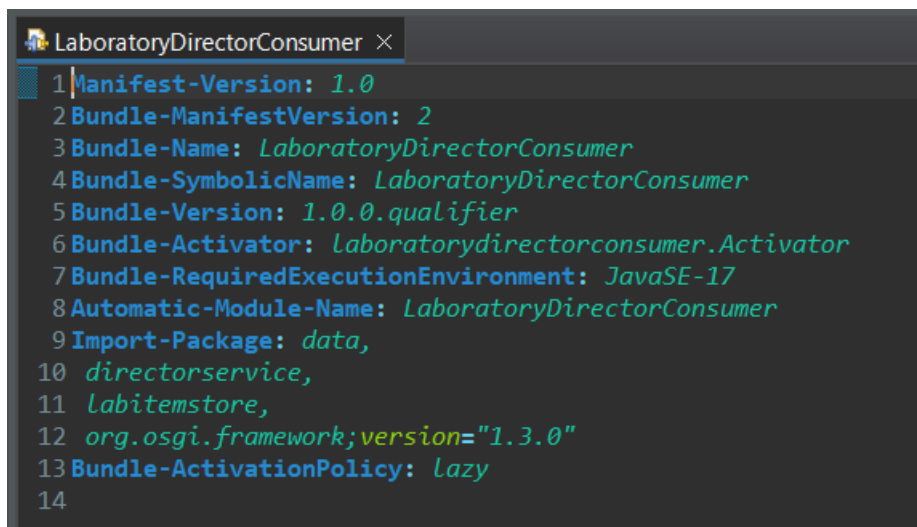

This is the part of the workflow of Director consumer side. Option 1 describes the view of laboratory item list by pressing one. Then by pressing 2 ask Director to enter the name and the quantity, then user can generate the bill which gives the total net price to Director. Director can iterate the process, in the end calculated net bill will be display as subtotal. If the Director wants to exit it can proceed by pressing option 3. If Director selects not related option, then system shows notification to enter a valid option.

B) – Manifest implementation

Director Consumer Manifest

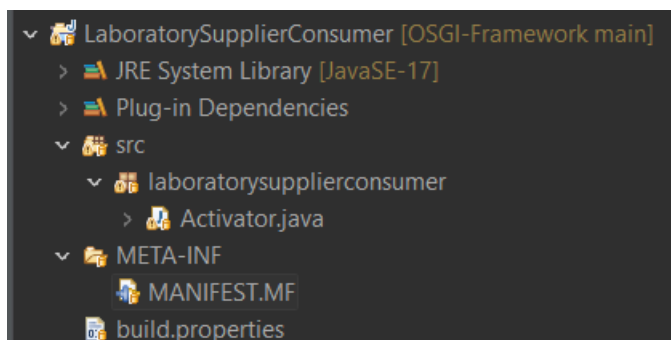

End user of system who are Director consumers will display the bill using the method of DirectorServiceImpl. This bill then prints and present it to the laboratory Director.

This is the Manifest file of Director consumer. Here, imported packages from `data`, `directorservice`, `labitemstore`, `org.osgi.framework`, and version from this we achieve the services provided by LaboratoryServiceProducer.

Supplier Consumer Manifest

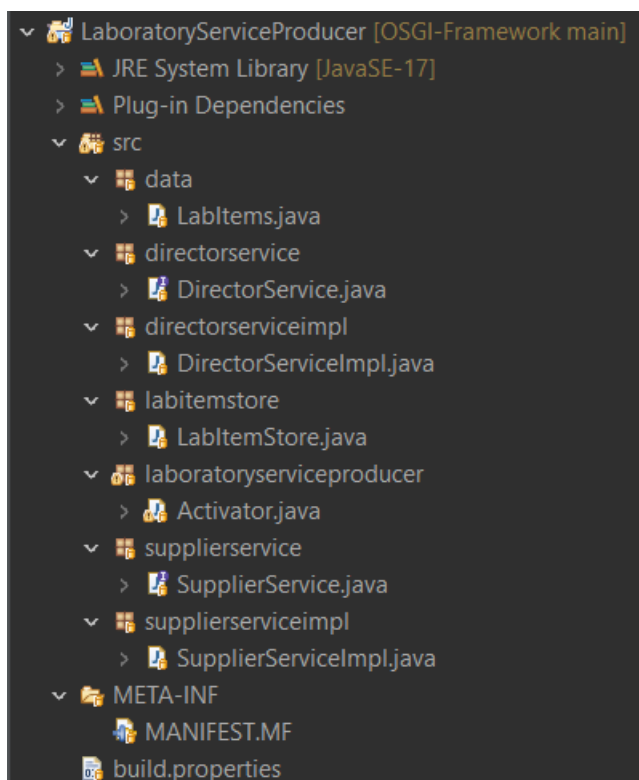

Laboratory item Supplier add items and have the privileged to manage the items and they can make discount to relevant items those details will be labitemstore **labItemsList** in producer.

```
LaboratorySupplierConsumer X
1 Manifest-Version: 1.0
2 Bundle-ManifestVersion: 2
3 Bundle-Name: LaboratorySupplierConsumer
4 Bundle-SymbolicName: LaboratorySupplierConsumer
5 Bundle-Version: 1.0.0.qualifier
6 Bundle-Activator: laboratorysupplierconsumer.Activator
7 Bundle-RequiredExecutionEnvironment: JavaSE-17
8 Automatic-Module-Name: LaboratorySupplierConsumer
9 Import-Package: data,
10 labitemstore,
11 org.osgi.framework;version="1.3.0",
12 supplierservice
13 Bundle-ActivationPolicy: lazy
14
```

In this supplier consumer manifest file, Imported the **data**, **labitemstore**, **supplierservice**, **org.osgi.framework** from producer.

Laboratory Service Producer Manifest

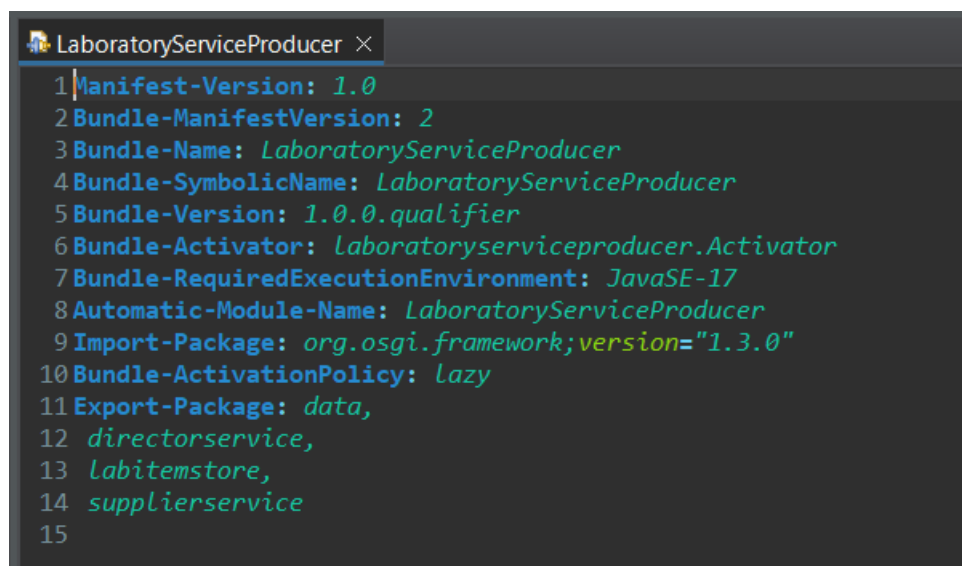

This is producer part of the system. There are two of them which are Director service and Supplier service.

In Director service,

DirectorService is the interface. DirectorServiceImpl is the implementation of the interface. It has calculation algorithms of the bill and implementation of viewing the laboratory item list. Director service will be export from the bundle. Then laboratory director consumer can use those services to do his tasks.

In Supplier service,

SupplierService is the interface and have the CRUD operations to manipulate items. SupplierServiceImpl class will implement the services in supplier services. Supplier service interface will export as a package. Then laboratory item supplier consumer can use those services to do his tasks.

```
1 Manifest-Version: 1.0
2 Bundle-ManifestVersion: 2
3 Bundle-Name: LaboratoryServiceProducer
4 Bundle-SymbolicName: LaboratoryServiceProducer
5 Bundle-Version: 1.0.0.qualifier
6 Bundle-Activator: Laboratoryserviceproducer.Activator
7 Bundle-RequiredExecutionEnvironment: JavaSE-17
8 Automatic-Module-Name: LaboratoryServiceProducer
9 Import-Package: org.osgi.framework;version="1.3.0"
10 Bundle-ActivationPolicy: lazy
11 Export-Package: data,
12 directorservice,
13 labitemstore,
14 supplierservice
15
```

In the manifest file it **imported** the org.osgi.framework package and **exported** the data, directorservice, supplierservice, labitemstore.

Activator has the list of items that's add by the supplier. It has the shared data between the consumer and producer. Items added by the Supplier can be view by the Director.

Data package has the LabItem class which stores the item details.

In the laboratory service producer activator class register the Director service and Supplier service.

C) – All the commands of bundle install and run in OSGi framework

Supplier Consumer Stopped
